SEESMART[®] MEETS YORK TOWNSHIP

York Township Highway Department is a municipal facility in Lombard, Ill. The lighting in the equipment garage was 20 years old and extremely poor. Because of the inadequate lighting, the staff could not easily work on the various vehicles and equipment, which caused employee dissatisfaction.

Seesmart[®] products helped York Township create a better work environment in the equipment garage with bright, energy-efficient LED lighting. The township's retrofit required the replacement of 132 eight-foot fluorescent tube lights. These dingy, yellow fluorescent products were replaced by 264 Seesmart 18-watt four-foot fluorescent tube lights.

York Township Highway Department achieved a number of benefits as a result of its lighting upgrade. The energy-efficient Seesmart lighting products should save York Township more than \$1,200 per year. And since the township is no longer using fluorescent tubes, they can expect reduced maintenance and energy usage as well.

In addition, the facility's carbon footprint has been reduced by 10.7 tons. And most importantly, the York Township staff is very pleased with the brighter lighting in the garage. Dick Schroeder, the York Township Highway Commissioner remarked, "This lighting is fantastic. My staff can actually see what they are working on. They love the lighting."

York Township Highway Department is just one of many satisfied Seesmart customers. Contact Seesmart today to see how our long-lasting, high-efficiency LED lighting products can transform your facility.
