

SEESMART PARKING SOLUTIONS

Memorial Sloan-Kettering Cancer Center

Ashforth-owned property

Pasadena City College

Seesmart's extensive product line makes it easy to upgrade entire parking facilities to LED lighting. Our wall packs and area lights are great for parking lots. For parking structures, our canopy lights and linear tube lights are ideal. We even offer solutions for elevators, stairwells, and attendant booths.

Seesmart products are energy-efficient, long-lived, high-quality, and produce beautiful light. Many of our commercial products are rated for 50,000 hours of operation and are covered by a 5 or 7 year warranty. Our products turn on and off instantly, won't hum or flicker, and perform superbly in the climate extremes experienced in parking facilities. Upgrading to Seesmart LED products also means you'll save labor usually devoted to frequent lamp and ballast replacement.

Seesmart has completed parking retrofits for numerous businesses and institutions, including Memorial Sloan-Kettering Cancer Center, Pasadena City College, The Ashforth Company, and SL Green. Each of these customers achieved lighting levels equivalent to or better than those they experienced under traditional lighting products. Each also cut the lighting energy usage of their parking structures by 50% or more. Many of these customers also received rebates from their local utilities for the energy savings their retrofits produced. And perhaps best of all, some expect to see a complete return of investment in as little as 15 months.

Parking facilities can be a great place in which to test lighting products and begin a lighting retrofit. They are typically easier to service without disrupting a work environment and so prove a great location for experimenting with different lighting solutions. Talk to your Seesmart representative today about beginning an LED demo installation.
