Seesmart, Inc. manufactures a comprehensive selection of high-efficiency LED lighting products for residential applications. Our LED lights include household lamps, PAR floodlights, MR16 spotlights, candelabras, mini-globes, and tube lights. These lamps can be installed in any room of your house, townhouse, or apartment. They are designed to fit into any standard fixture, too, such as recessed cans, wall sconces, table or floor lamps, chandeliers, pendant lights, track lighting, or surface mounted fixtures.

Our LEDs consume 50% to 80% less energy than conventional household lamps and are typically rated to last 50,000 hours or more. They also come in a broad range of color temperatures from warm white (2700-3200K) to day white (5500-6000K). Some models are also dimmable. All our LEDs turn on and off instantly.

The exceptionally long lifetimes of Seesmart's LED residential lamps means that they will last for years and years, depending on how many hours a day they are used. They can last for almost six years if left on all day, every day; or they could last 10 to 15 years in a normal residential environment. That's why Seesmart LEDs carry warranties of 5 to 7 years. And the energy saved by LEDs means that they usually pay for themselves in 9 to 15 months, on average.

Seesmart LEDs offer a smart lighting solution for large apartment complexes, where they can dramatically cut energy and maintenance costs. Another advantage of LEDs is that they give off much less heat than regular incandescent lamps, which cuts down on air-conditioning costs during the hot summer days. Many utilities also offer valuable rebates that can help pay for LED installations.

Visit our website and browse through our enormous assortment of residential and household LEDs. Or talk to a Seesmart representative today about scheduling an LED demo installation for your specific residential lighting needs.
